The Paddock - Introduction

What is this all about?

Tottenham Hale contains a great variety of open spaces, from local park and play features to regionally important natural landscapes.

At the Paddock, Haringey Council is working with The Conservation Volunteers (TCV) and Friends group to transform the Paddock from an underused and overgrown space into a welcoming Local Nature Reserve through new management arrangements and a programme of physical improvements.

We want to hear your views on the Paddock and how you would like to see it enhanced for wildlife and local residents. Your feedback will help shape the developing plans for the site.

Key Objectives

Haringey's key objectives for the Paddock site are to create;

- A well-managed, exemplar site for ecology and biodiversity in Haringey
- A well-used green space, which supports community and educational activities, and provides multiple opportunities for visitors to explore and learn in a unique ecological setting
- A well-connected green space, which seamlessly integrates with the new Hale Wharf pedestrian bridges and Ferry Lane improvements and is a key element of the emerging 'green grid' of routes connecting Tottenham to the Lea Valley.

What we have done so far

The first phase of public consultation was to introduce the site, summarise the aims of the project and the initial research completed. We asked you for feedback on specific questions including:

- Which features are most important to you?
- How do you enjoy and connect to wildlife?
- What would you most like to improve?

All the responses we received went on to inform our proposals for the site, which form the basis of this next stage of consultation

Get Involved

On the following boards, you can read the latest information on the proposed enhancement plans for the Paddock. This is followed by a short survey for you to provide feedback on what you have read.
There are also lots of new volunteering opportunities to help maintain the Paddock and learn about the wildlife and habitats.
