"Race 99 Map"

The optimum tune for your V8 Mustang, created in collaboration with the top calibrators from SCT USA the word leaders in Mustang tuning. This tune is ideally suited for the standard car set up, on our Dyno our std test car running Shell V-Power made 411Bhp & 365FtLb of torque. After flashing the car with the Race 99 tune we made an impressive 442Bhp and 396FtLb. We have ironed out several flat spots, improved throttle response and make gear changes much sharper when punching the throttle.

Instructions

STAGE 1. IMap / Vehicle Required.

1.   Plug the iMap into your Vehicle using the OBD II Cable provided.
2.   Once the main menu has loaded, select Your vehicle (Mustang) then Program Vehicle.
3.   The handset will say no tune files found.
4.   The handset has now read your vehicles VIN number and now knows it needs updating.
5.   Unplug The iMap from your vehicle

STAGE 2. PC Required.

6.   Log on to your PC/Laptop and go to the Dreamscience website, go to downloads.

7. Download the SCT Device Update software installer. Selecting yes until it has downloaded to your desktop.

8. Open the SCT Device updater app on your desktop.

9. Select "Automatically check for updates" and select the update when it becomes available.

16.   Once the update is complete you are now able unplug your iMap from your PC/ Laptop and plug it back into your vehicle.

STAGE 3. Vehicle / iMap Required.

Plug your iMap into the vehicle.

Select program vehicle, Select your Map. Enjoy..
