Introduction

Currently in its fifth year, the Autodata Most Serviced Vehicles Report uses analytics from Autodata's extensive customer base across the globe. Data from usage of Autodata across the top 20 countries in 2019 is collated and analysed to provide valuable industry intelligence. The report's findings are used by industry media to communicate useful insights on global automotive aftermarket trends to their readerships.

The term 'most serviced' is used deliberately throughout this report. When used in relation to vehicles, it refers to the vehicle model information that workshops have accessed most frequently during 2019. The report also highlights some of the key service, maintenance and repair trends that were seen over this period, to help aftermarket businesses plan for 2020.

Over 85,000 workshops subscribe to Autodata's applications to access the precise information required to service, maintain, diagnose and repair vehicles from more than 142 manufacturers. Aftermarket professionals access the company's robust databases from over 100 countries, including those subscribing directly to the Autodata application and those accessing via third party solutions.

Key Trends & Insights

The automotive industry is going through a radical transformation. The growth of electric vehicles, connected technology, autonomous driving and shared mobility are some of the major trends that are set to significantly impact the automotive aftermarket industry.

"According to the *BloombergNEF* Electrical Vehicle Outlook 2019* report, over 2 million electric vehicles were sold in 2018 and sales are expected to rise to 10 million in 2025, 28 million in 2030 and 56 million by 2040."

To deal effectively with this growth in electric vehicles, it is vital for automotive technicians to have quick and instant access to reliable technical data. Autodata is helping the automotive aftermarket adapt to this rapidly changing market by investing in new vehicle content and advising of safety practices to ensure workshops can work with confidence on electric and hybrid vehicles.

In 2019, Autodata added new high voltage component warnings identifiers to its popular Electrical component locations diagrams. These potentially dangerous components are now instantly recognisable by their (ISO) high voltage symbol on the diagram. Further new features include additions of our Hybrid/Electric vehicle warning message identifiers when working with or around high voltage components and the introduction of new drive system wiring diagrams for electric and hybrid vehicles.

This year's data shows an increase of over 25% in requests from our customers to access our Electrical component locations module.

In addition, with the increases in vehicle complexity, we have seen an increase in usage of our Diagnostic module by customers to help resolve new issues encountered.

Autodata's constant evolution of the product helps technicians to work in a safer and more secure manner on the increasing number of electric and hybrid vehicles visiting their workshops today and also in the future.

The report also reinforces the dominance of national brands being the most serviced cars within their respective countries. In Germany all top ten places were taken up by German cars and it was the same for French cars in France. In Italy, Italian cars made up 50% of the Italian top ten and in Sweden, Swedish cars accounted for 70% of the top ten with Volvo models filling the top three places.

*BloombergNEF Electrical Vehicle Outlook 2019

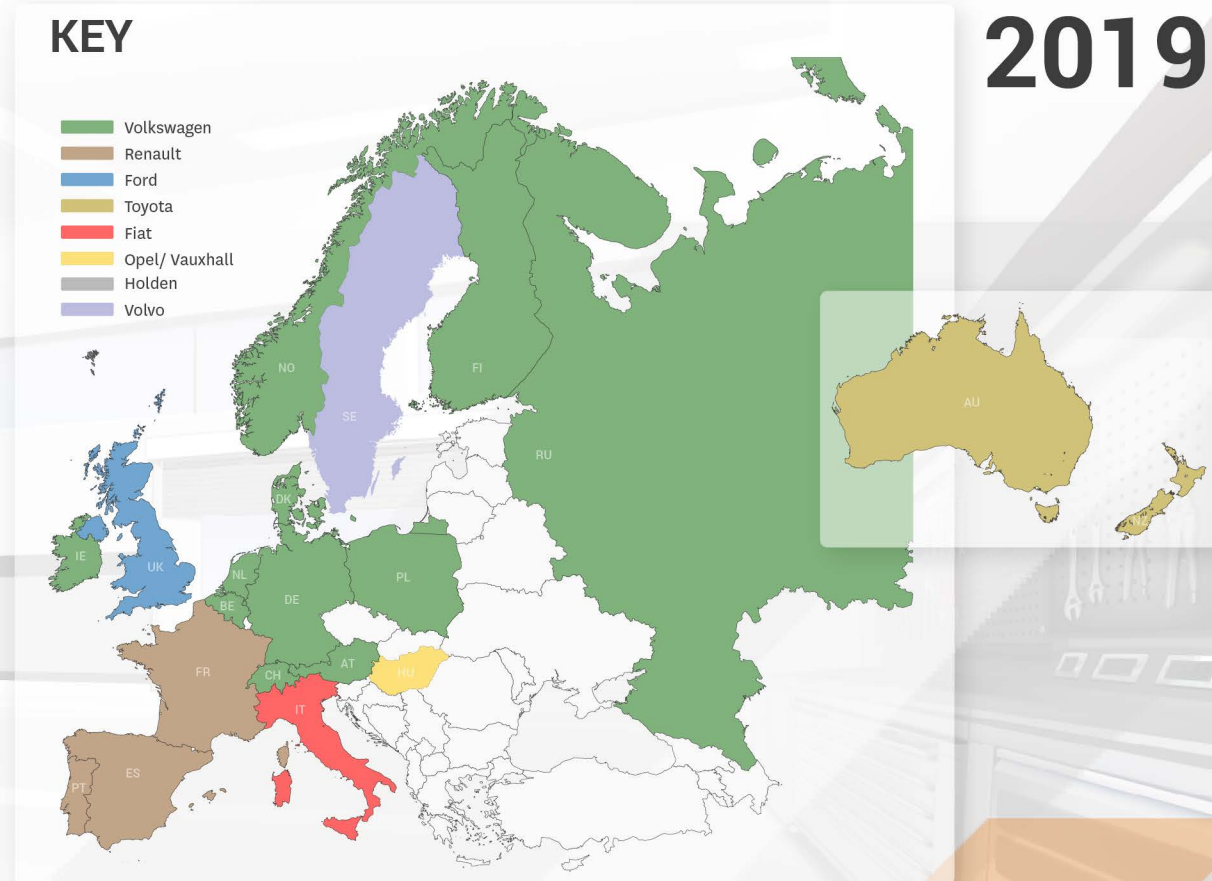

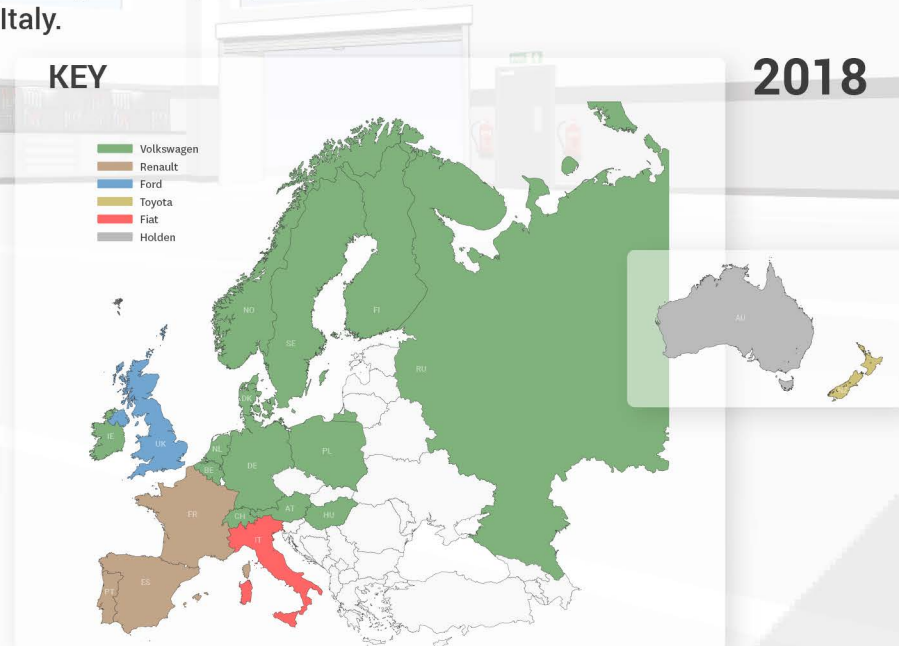

Most Serviced Car Manufacturer by Country

MANUFACTURERS

When all the markets are amalgamated, Ford was the overall most serviced manufacturer followed closely by Volkswagen in second place.

Interestingly, when considering markets individually, Volkswagen continues to dominate as the most serviced brand by being in first place in 55% of the countries surveyed. A couple of noteworthy results in the report are Volvo replacing Volkswagen at the top of the list in Sweden and Opel/Vauxhall taking top spot from Volkswagen in Hungary.

Another notable observation is found in the Australian market, where Toyota replaced Holden as the most serviced brand. Renault maintained its position from last year as the most serviced brand in France, Portugal and Spain, and once again Fiat is the most serviced brand in Italy.

Aftermarket Trends of 2019

Engine oil, Technical specifications and Camshaft drive system were the top three most accessed modules. The Estimate calculator module grabbed the top spot for the 'average time' spent per day during this period.

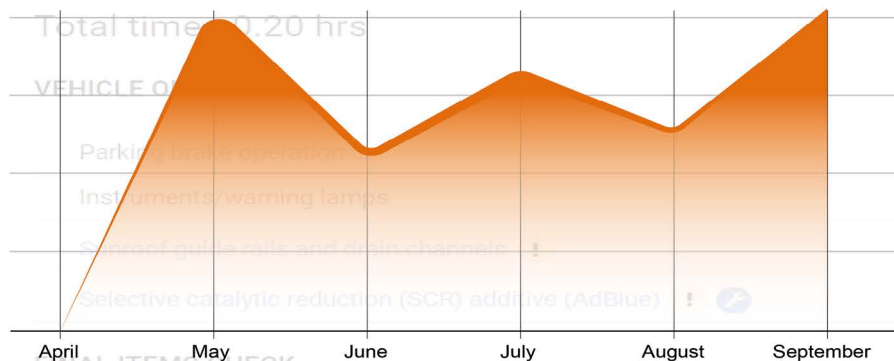

With technicians having checked 47.84 million pieces of technical information through Autodata, subscribers are increasingly utilising its data to assist them in their day-to-day work.

MAIN SERVICE

Requests to Autodata's Service schedule module were generally uniform throughout the period. This is in line with expectations as vehicle servicing is carried out throughout the year. In step with other Autodata subjects, we have seen an overall increase in the number of requests to this module which then remained steady throughout April to September. Interestingly, requests to the Service brakes and Service transmission modules both showed a gradual increase from August to September.

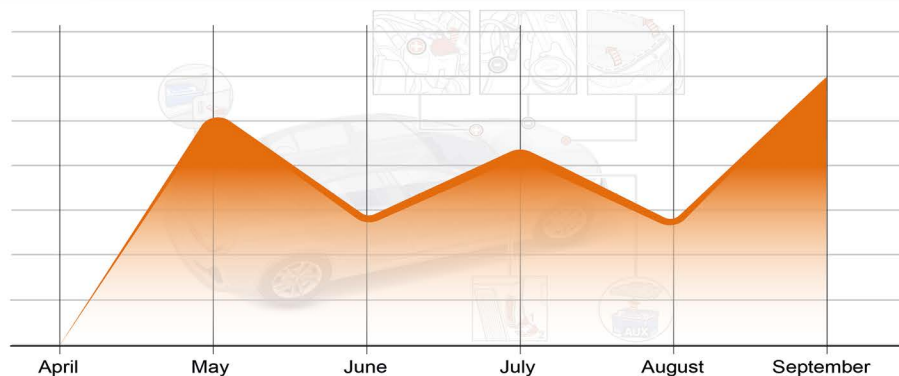

TYRES

Access to the Tyres module rose at the end of April before slightly dipping in June and then rising upwards towards September. This trend could be indicative of the seasonal change from winter to summer tyres and then back again to winter tyres. This practice is particularly prevalent across several European countries where it is either mandatory or recommended that vehicles are fitted with winter tyres over the winter season.

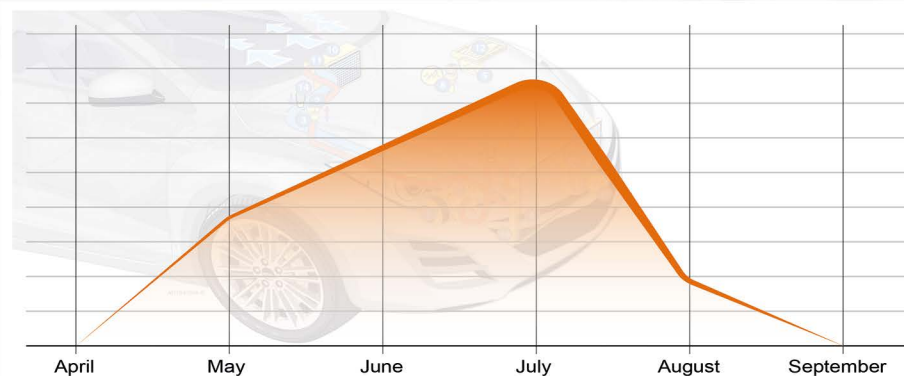

BATTERY

Use of Autodata's Battery disconnection and reconnection module rose in April and then remained consistent throughout May to August and then rose again slightly in September as several countries in the Northern Hemisphere approached the colder months. Battery faults are the most common cause of breakdown, especially in winter with the colder conditions putting more stress on batteries. The increased electrical load during colder months will reduce the battery's performance, particularly for older batteries, and could ultimately result in battery failure requiring replacement or lead to a breakdown. In general, with the increasing complexity of modern cars, disconnecting and reconnecting batteries are no longer simple procedures and will require specialist advice to carry out, which Autodata provides. Similar requests from Australia and New Zealand showed a peak in May and then a gradual downward trajectory to September corresponding to their seasonal change from winter to summer.

AIR CONDITIONING

It is no surprise to see that during the peak of summer in the Northern Hemisphere requests to the Service air conditioning module were at their highest. The module saw a steady rise in access from the month of April, peaking in July and then gradually dropping towards September. This result is entirely consistent with extreme weather experienced in 2019 across the globe. According to analysis conducted by Copernicus Climate Change Service (C3S) * based out of Europe, July 2019 ranked as the hottest month globally in recorded history. July is typically the warmest month of the year (Northern Hemisphere), but in 2019 the preceding month of June was exceptionally warm, too. Most notable was the heat wave experienced towards the end of July across Western Europe with France, Belgium, Germany, Netherlands and the United Kingdom all setting new all-time high temperature records. However, we also received an increase in requests to the Diagnostic air conditioning module at the same time implying that our workshops were experiencing a rise in requests for assistance. In Australia and New Zealand, access to the air conditioning module showed the opposite trend as expected with a steady rise from June to September corresponding to the seasonal change from winter to summer in the Southern Hemisphere.

Key Vehicle Insights

KEY CAR INSIGHTS

The results are in and the Opel/Vauxhall Corsa-D is the new overall most serviced car in the countries surveyed in the 2019 report. It replaced its sister model the Opel/Vauxhall Astra-H which dropped to eighth position. The consistent Ford Focus ('04/'08) retained its second place from last year and is followed by the Nissan Qashqai/Qashqai +2 (J10) in third. The Fiat 500/500C (07-) was in fourth position in the report and not only topped the table in Italy, as expected, but also in Belgium and the Netherlands.

Once again, the Holden Commodore (VE) (06-10) was Australia's most serviced car, with the Volkswagen Golf VI (5K1) (08-13) second.

The Jeep Grand Cherokee (11-) was in third place and this result is particularly noteworthy as the model did not feature in last year's top ten.

Opel/Vauxhall Corsa-D
is the new overall most
serviced car in the 2019
report

KEY LIGHT COMMERCIAL VEHICLE INSIGHTS

The Volkswagen Transporter T5 (04-15) retained its position as the most serviced light commercial vehicle (LCV) for the third year in a row and it was in first place in 60% of the countries surveyed in the report. The Ford Transit ('06) was in second place with the Mercedes-Benz Sprinter (06-18) third. The VW Caddy/Maxi (2CX) (10-15) did not appear in the Top Ten serviced light commercial vehicles (LCVs) this year after finishing in second place last year.

The Volkswagen Transporter T5 (04-15) was also the Most Serviced Diesel Vehicle, followed once again by the Ford Transit ('06) in second place. In total there were five light commercial vehicles (LCVs) in the Top Ten Most Serviced Diesel Vehicles and unsurprisingly none in the Most Serviced Petrol Vehicles.

KEY ELECTRIC INSIGHTS

The Nissan Leaf (ZE0) (10-18) was the overall most serviced electric vehicle primarily due to the markets of Norway and the UK. However, the Tesla Model S (13-) is just behind in second place and was the most serviced electric vehicle in 80% of the countries surveyed. Norway has embraced electric vehicles with enthusiasm and in the 2019 report we see that 44% of all electric vehicles requests accessed through Autodata originated from Norwegian workshops and subscribers.

KEY MOTORCYCLE INSIGHTS

As in previous years, Japanese models continue to dominate this segment taking eight of the top ten places. The most serviced motorcycle was the Honda CBR with the BMW R1200 coming in second place. The Honda CBR was the most serviced motorcycle in 43% of the countries surveyed. The Yamaha YZF, first in last year's report, dropped to fourth place.

About Autodata

Autodata is a trusted and leading provider of technical automotive information worldwide. Since 1972, Autodata has equipped professionals in the automotive aftermarket with the technical information required to service, maintain, diagnose and repair vehicles. Autodata's professional workshop applications for cars, light commercial vehicles, and motorcycles are accessed by over 85,000 Automotive businesses equating to 100,000 + users. Currently it is accessed in over 100 countries.

Working directly with vehicle manufacturers, Autodata processes technical information by verifying the accuracy of the manufacturers information, then standardising the terminology and illustrations across all vehicle manufacturers into Autodata's practical and easy-to-understand format for professionals. The data within Autodata's workshop applications is licenced from 142 manufacturers, covering 39,000 vehicle models worldwide.

Autodata is constantly evolving, regularly updating existing features and introducing new practical modules, to provide the most accurate and user-friendly automotive technical data to workshops.

As well as the workshop application for professionals, Autodata also has an Application Program Interface (API) that enables others to develop new business and consumer solutions underpinned by Autodata information.

Autodata is a Solera company, giving it a powerful and unique position in the market to deliver the most valuable solutions to the market.

Solera is a global leader in risk and asset management data and software solutions for the automotive and insurance industries. Solera is active in over 90 countries across six continents. Solera has over 235,000 customers and partners, including many of the largest U.S. and European P&C insurance companies and most of the world's largest vehicle OEMs, as well as national governments, financial institutions, vehicle dealership, vehicle repair shops, salvage yards and vehicle buyers and sellers. For more information about Solera visit www.solera.com.
