THE FORCES SHOW

Support Resources

Techniquest
Stuart Street
Cardiff
CF10 5BW

Tel: 029 20 475 475
www.techniquest.org
The session has two parts:

- **30-minute science theatre show** – pupils participate in an interactive science theatre show exploring forces, including pushes, pulls, air resistance, gravity and spreading forces. At the end of the show, pupils are asked to identify the key words used in the show.

- **30 minutes exploring the exhibition** – pupils are challenged to investigate the exhibition and identify items within it that demonstrate the key words used in the first part of the show. Teachers are given cameras to take photos of the pupils’ investigations.

**Copyright**

Teachers may reproduce the following materials without infringing copyright, so long as copies are made for use in their own schools. Techniquest’s permission must be obtained before reproducing these materials for any other purpose.

**Skills Development**

The activities in the show and these support resources feature the following skills:

- Developing Communication
- Developing Number
- Developing Thinking
- Personal Social Education
Over the page are tips for making the most of the photographs taken by your pupils during their visit to Techniquest. There are also 12 photographs of Techniquest staff within the exhibition for your use. These include information about the key concepts shown.
Pupils should select one photograph from those taken during the visit. They should explain which key concepts from the show the photograph shows and how to the rest of the class. Pupils should compare their chosen photographs.

Give each group a camera and one of the key concepts. Challenge pupils to explore the school and find examples of their key concept and photograph it. Pupils can then make a presentation for the rest of the class.

Challenge the pupils to explore the school, inside and outside, to find as many examples as possible of the key concepts. For an added challenge, set a time limit of 5 minutes. Pupils should then discuss their lists with the rest of the class.

Pupils should select one exhibit that they really enjoyed using during their visit. They should then create a picture of it and challenge pupils to identify which key concept from the show it demonstrates and how.
Sample Questions

Who took this photograph?

What is this a photograph of?

How are you showing this key word?

Which key word are you showing in this photograph?

Are there any other key words that could be used to describe this photograph?

Has anyone else taken a photograph of this to show this key word?

Can you see anything in this room that would show this key word?

What else could you have taken a photograph of to show this key word?

How does the photograph show the key word?

What other key words could this photograph show?

The Forces Show
The Forces Show
The Forces Show
The Forces Show
The Forces Show
The Forces Show

Liz with ‘Vocal Wonders’:
• Push - Liz is pushing a button to work the exhibit.

Kate with ‘Kugel’:
• Push - the Kugel weighs one ton but can be easily pushed and spun.
• Friction - in this case, a lack of friction, caused by the flowing water.

Tesla with ‘Bernoulli Blower’:
• Air resistance - The ball hovers in the air stream from the fan in the exhibit.

Bruce with ‘Kapla Blocks’:
• Pull - the drawer is pulled back.

Rhys with ‘Pitch Perfect’
• Air resistance - created as the ball moves through the air.
• Push - the ball is being thrown.

Anna with ‘Heave-Ho!’:
• Friction - created as the rope is pulled through the pulley.
• Pull - Anna is pulling the rope to lift the weights.
The Forces Show

Berian with ‘Orbits’:
- Friction - in this case, a lack of friction; the balls easily slide across the shiny surface.
- Gravity - the balls are pulled towards the holes in the middle of the exhibit.

Luke with ‘Crazy Crane’:
- Bonus question - Other types of force - this shows tension force. This is a force transmitted through string, rope, cable or wire when it is pulled tight.

Joe with ‘Strings’:
- Bonus question - Other types of force - this shows tension force. This is a force transmitted through string, rope, cable or wire when it is pulled tight. As Joe presses his foot on the pedal at the bottom of the exhibit, the guitar strings are pulled tight.

Linda with ‘Air Stream’:
- Push - the foam disks are pushed by the air blown up through the table.
- Friction - the air reduces the friction between the disk and the table top.
- Air resistance - created as the disks move along.

Liz with ‘Hot Air Balloon’:
- Push - Liz is pushing the button to operate the exhibit. This powers the heater inside. The rising temperature is shown on the LED display. The longer Liz pushes the button, the higher the temperature rises, until the balloon can be launched.

Simon with ‘Pop Gun’:
- Friction - created as the rope is pulled through the pulley.
- Pull - Simon is pulling the rope to lift the bowling ball. When Simon lets go of the rope, the force of the bowling ball hitting the base of the exhibit will cause the tennis ball to fly up into the air.
Key Concepts

Push      Pull

Gravity   Magnetism

Friction

Air resistance

Bonus question:
Can you find any other forces?
The Forces Show

TASC Wheel
Thinking Actively in a Social Context

Challenge
Cat and Simon were exploring the “Pop Gun” exhibit in Techniquest. Simon said, “The bowling ball is really heavy, but I find it really easy to lift it using the rope. This must mean I’m really strong.” Cat thought about it for a while and asked, “Do you think the pulley makes it easier to lift the ball?”

- Explore Cat’s question.
- Investigate pulleys and pulley systems.
- Design a pulley to lift a heavy weight.
Gather/Organise
This is the starting point for the activity. Pupils assimilate all their knowledge about the topic into their working memory. At this stage it is possible to identify what pupils already know and any gaps in their knowledge. It is also possible to begin differentiating between pupils.

Questions to ask pupils at this stage include:
• What do you know about this?
• Where have you met this before?
• What information do you have?
• How much do you understand?
• What questions do you need to ask?

Identify
Pupils explore their understanding of the task to make sure they know what is required of them. Pupils can also set the success criteria for the activity at this stage.

Questions to ask pupils at this stage include:
• What is the task?
• What are your goals?
• What are your obstacles?
• What do you need to know?
• What do you need to do this?

Generate
This is a creative and open-ended stage. Pupils may engage in brainstorming. Here all ideas about how to approach the task are valid.

Questions to ask pupils at this stage include:
• How many ideas can you find?
• Who can help you?
• Where can you find out more?
• What do other people think?
• Is there another way?

Decide
This is a logical, rational, left-brained process, in contrast to the previous stage. Pupils consider time constraints, available resources, health and safety, as well as whether the idea fulfils the brief, when making decisions.

Questions to ask pupils at this stage include:
• Which ideas are important?
• Which is the best idea?
• What will happen if…?
• What is your plan?
• What else do you need to do?

Implement
Pupils test their idea in an attempt to fulfil the criteria for the task. Teamwork is key to their success at this stage. Pupils may work to a structured plan. The focus for this stage is ‘maximum thinking, minimum recording’. This stage is all about developing thinking.

Questions to ask pupils at this stage include:
• How do you do it?
• How do you check your progress?
• Are you doing it correctly?
• Is your plan working?
• What do you do next?

Evaluate
Pupils should be realistic about their achievements and identify the next steps for improvement. Self and peer evaluation are key elements of this process.

Questions to ask pupils at this stage include:
• What have you done?
• How well did you do?
• How could you do better?
• Did you solve the problem?
• Did you work well in your group?
Communicate

Pupils present their findings to an audience; this could be within the class, the school or beyond. This stage can increase the pupils’ motivation and engagement.

Questions to ask pupils at this stage include:
- Who will you tell?
- How will you tell or present?
- What will you say?
- How will you explain?
- How will you interest others?

Learn from Experience

This final stage focuses on metacognition; this is ‘thinking about thinking’. In this stage pupils reflect on and discuss their learning. This stage can significantly enhance the impact of the learning experiences.

Questions to ask pupils at this stage include:
- What have you learned?
- How have you changed?
- What do you think and feel now?
- How can you use what you have learnt?
- How would you use this again?
Concept Photos

These ‘concept photos’ have been developed to promote discussion and to stimulate scientific thinking. They show different people discussing an everyday situation and presenting alternative explanations for what can be observed. Because of this, they are a good tool for demonstrating real life applications of science. Each concept photo shows one of Techniquest’s exhibits or an everyday situation linked to the science-based topic. Open questions can be used to stimulate thinking and discussion. All pupils’ ideas and points of view should be treated equally.

Photo 1

The following questions can be used:

- Do you agree with any of the people in the picture? Who? Why?
- Do you disagree with any of the people in the picture? Who? Why?
- Can you think of any other explanations that are not included here?
- How can we find out which point of view is the most suitable?
- Is it possible that more than one point of view is suitable here?
- Why do you think different pupils have different points of view?

Photo 2

For this activity, only one of the speech bubbles has been filled in. The following open questions can be used:

- Do you agree or disagree with this statement? Why?
- Can you think of any other explanations that are not included here? These should be filled in on the image.
- Now we have some explanations, which do you agree or disagree with? Why?
- Is it possible that more than one point of view is suitable here?

Developing your own images

To do this:

- Use everyday contexts that pupils are familiar with.
- Provide three or four alternative statements for discussion.
- Use positive rather than negative statements.
- Refer to research on common pupil misconceptions for guidance on statements.
- Include the scientifically acceptable viewpoint.
I think the rocket lands on the ground after it is launched because it runs out of force.

I think it lands because there is no upwards force after it is launched.

I think it lands because gravity pulls it down.
I think horseshoe magnets are the strongest type of magnet because they can attract at both ends.
Curriculum Links:

Range
How Things Work
Pupils are given opportunities to study:
• Forces of different kinds.
• The ways in which forces can affect movement and how forces can be compared.

The Sustainable Earth
Pupils are also given some opportunities to study:
• A comparison of the features and properties of some natural and made materials.
• The properties of materials relating to their uses (magnetic, non-magnetic, rough, smooth).

Skills

Communication
Pupils are given opportunities to:
• Search for, access, and select relevant scientific information, from a range of sources.

Enquiry
Planning
Pupils decide upon and give some justification for each of the following:
• The choice of success criteria.
• Predictions using some previous knowledge and understanding.
• Where and how to find relevant information and ideas.

Developing
Pupils are given opportunities to:
• Use apparatus and equipment correctly and safely.

• Make comparisons and identify and describe trends or patterns in data.
• Use some prior knowledge to explain links between cause and effect when concluding.
• Consider different interpretations and distinguish between facts, beliefs and opinions, giving reasons and beginning to recognise bias.
• Form considered opinions and make informed decisions.

Reflecting
Pupils think about what they have done in order to consolidate learning and transfer skills, by:
• Beginning to evaluate outcomes against success criteria.
• Deciding whether the approach/method was successful.
• Describing any amendments made to the planned approach/method.
• Suggesting how the approach/method could have been improved.
• Linking the learning to similar situations within and outside school.

Skills Framework:
The following skills are also developed through the show:
## Developing Thinking

### Plan
- Asking questions.
- Activating prior skills, knowledge and understanding.
- Gathering information.
- Determining the process/method and strategy.
- Determining success criteria.

### Develop
- Generating and developing ideas.
- Valuing errors and unexpected outcomes.
- Entrepreneurial thinking.
- Thinking about cause and effect and making inferences.
- Thinking logically and seeking patterns.
- Considering evidence, information and ideas.
- Forming opinions and making decisions.
- Monitoring progress.

### Reflect
- Reviewing outcomes and success criteria.
- Reviewing the process/method.
- Evaluate own learning and thinking.
- Linking and lateral thinking.

## Developing Communication

### Oracy
- Developing information and ideas.
- Presenting information and ideas.

### Reading
- Locating, selecting and using information.
- Using reading strategies.
- Responding to what has been read.

### Writing
- Organising ideas and information.
- Writing accurately.

### Wider Communication Skills
- Communicating ideas and emotions.
- Communicating information.

## Developing Number

### Use Mathematical Information
- Using numbers.
- Measuring.
- Gathering information.

### Calculate
- Using the number system.
- Using a variety of methods.

### Interpret and Present Findings
- Talking about and explaining work.
- Comparing data.
- Recording and interpreting data and presenting findings.

## Developing ICT

### ICT Skills Framework
- Finding and developing information and ideas.
- Creating and presenting information and ideas.

## Key
- Main focus
- Incidental focus
- No intended focus
