Communication Strategy Report](#)

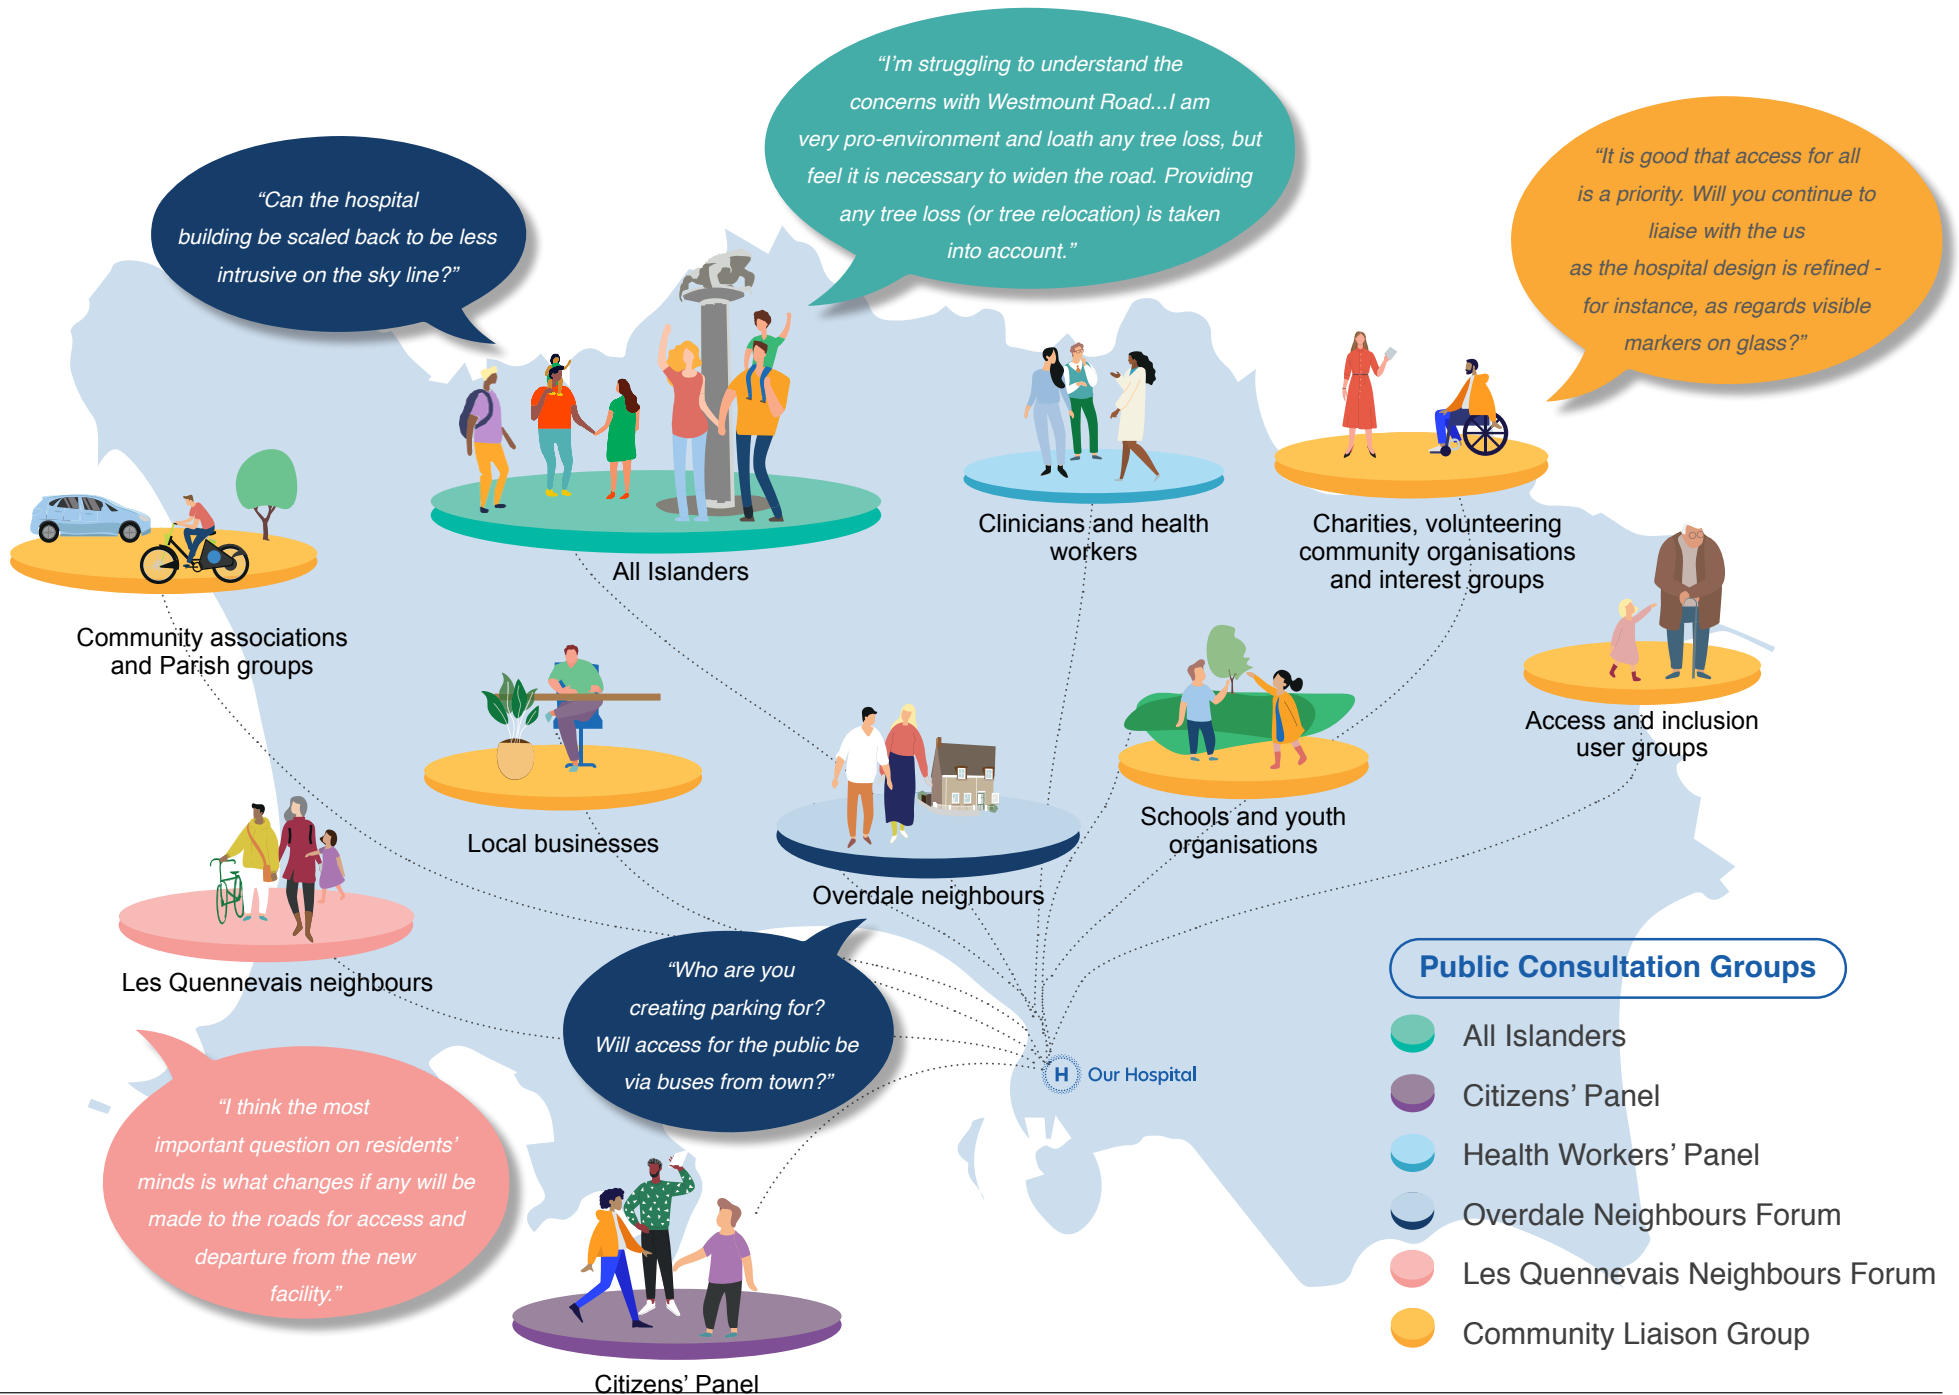

Engagement Principles

- To keep Islanders informed of the project's progress/key milestones and any works that may impact neighbours.
- To give the project and its process integrity and credibility, and build support and trust among Islanders.
- To ensure Islanders have an opportunity to express their views and have them listened to and taken into account.
- To ensure that Islanders, healthcare staff and stakeholders know how, where and when their involvement is needed.
- To ensure that States Members are kept informed of planned consultation events and their outcomes.
- To ensure the relevant Parish officials are consulted as to the provisions of the public consultation process.
- To create and maintain a regular flow of information, and share updates from the project to key stakeholders, healthcare staff and Islanders on engagement events and social value initiatives.
- To organise, manage and run key public information events.

- To construct an evolving core narrative for the project to ensure stakeholders, healthcare workers and the public are clear about the project's objectives and aims.
- To help ensure that the planning applications for the new hospital and associated early works are successfully submitted.
- To ensure that neighbours and any stakeholders directly affected by the project, are engaged and consulted on potential impacts and that their feedback is considered in view of minimising such impacts through the design process.
