## REFRIGERATED VEHICLES

### WHY PANELTEX?

#### CLASS-LEADING PAYLOAD

› Unrivalled payload for 3.5T vehicles is available, thanks to Paneltex's innovative lightweighting technology, which does not detrimentally affect temperature control or thermal efficiency

#### THERMAL EFFICIENCY

- › Class-leading payload offered with the most thermally efficient insulated bodywork of any vehicle available in their class
- › Certified ATP Class A - C is available on all Paneltex 3.5T vehicles

#### ON-BRAND STYLING AND AERODYNAMICS OPTIONS

- › Paneltex GRP mouldings allow for a lightweight, low-cost, truly customizable style
- › Options available include cab and fridge fairings, side skirts and rear bumpers
- › In-house painting and colour mixing facility keeps vans true to any operators' brand

#### OUTSTANDING WARRANTY AND MAINTENANCE

- › Paneltex offers a complete warranty and spare parts service, with next day delivery on spare parts, which are low-cost and simple to fit, keeping vehicle off-road times to a minimum

PANELTEX 3.5T REFRIGERATED VEHICLES set the standard for the 3.5 tonne market. As well as offering ATP Class C on all 3.5T refrigerated bodywork, this is strongly accentuated by Paneltex's industry-leading payload achieved on 3.5 tonne box bodies. Over the years, Paneltex has innovated and refined its already top quality home delivery concept, falling in line with Paneltex values of continual improvement, to retain its ability to produce the lightest-weight vans available, without compromising on temperature control and thermal efficiency. The result of so many years of extensive work has resulted in an urban home delivery vehicle with maximum storage capacity and access, highly efficient insulation, low unladen weight and the highest available resultant payload.

## REFRIGERATED VEHICLES

- Many grocery retailers rely on hundreds of Paneltex vehicles to deliver high quality products in perfect condition every day. The iconic vans seen by the end customer can be supported by complete transport systems comprising single- and double- deck trunking trailers, large temperature-controlled trucks, modular building systems and alternative 'last-mile' delivery systems, all produced by Paneltex.
- ATP type approval extends throughout the range and innovative design features ensure the finished vehicle is both functional and aesthetically pleasing. A particular feature of Paneltex 3.5T vehicles is the unique direct air system or air deflector, which can improve refrigeration performance significantly, leading to reduced fuel consumption.
- What is critical for these vehicles is the way Paneltex will work with an operator to design an individual vehicle, targeted towards seamless integration into the system in which it will be working. Paneltex vehicles are not generic, standard products shoehorned into an operation, but a next generation vehicle, specifically tailored to improve operating efficiency. The Paneltex design team is well-known for its ability to turn ideas into added value for any business, through the provision of highly efficient, high quality delivery vehicles.

---

## SUPPORTIVE AFTERCARE

---

All Paneltex products are backed by strong warranty and exceptional aftersales support. Spare parts stocks are maintained for 10 year, as a matter of policy and, as well as the web-based spare parts ordering system, the helpful team is committed to finding the correct part and providing next-day delivery of a wide variety of spare parts. Alongside this, the warranty and aftercare team is dedicated to keeping vehicle off-road times to an absolute minimum. Working extended hours and going the extra mile is a common occurrence for every member of the team, which is a massive testament to their high success rate at getting vehicles back in operation when issues unexpectedly arise.
