

Bespoke Control Systems

We build bespoke control panels, designed to meet to meet customer-specific requirements while meeting all appropriate regulations.

Hydor are able to manufacture everything from custom-built panels for small pump/fan starter panels and bespoke drive systems, right through to large intelligent poultry house control centres. All panels conform to the latest industry standards and undergo rigorous testing to ensure they meet our high performance and quality requirements.

Utilising the extensive skills and experience of our engineers, we offer full in-house design capabilities and advanced manufacturing techniques, all from our purpose built 10,000 sq ft facilities in the south-west.

In addition to our extensive agricultural experience, we regularly build controls for a wide and varied range of applications, and are confident in our abilities to meet your needs, how ever big or small your requirements may be.

Features & Benefits

- Completely bespoke control panels manufactured to exact specifications and agreed to timescales
- Personal service by our team of experienced engineers and sales/service departments
- Full in-house design capabilities utilising the latest AutoCAD design software
- Every panel undergoes comprehensive electrical and functional testing as standard before leaving our premises
- Highly qualified and experienced engineers design and build products to the latest industry standards
- Extensive experience in a wide range of applications including: universities, hospitals, marine services, atomic energy de-commissioning agents, utility services industries including water and wastewater treatment, HVAC, building management systems, air handling units and chemical dosing
