

Munters Rotem Communicator

The Munters Rotem Communicator is an alarm and communication system used by farmers to monitor and control their Munters Rotem Controllers and accessories. The Communicator enables full control over all events and procedures, locally and remotely.

Features & Benefits

- Alarms and data in real-time enable optimal management of your controllers, 24/7
- Remote controller configuration enables centralized management of all farms from one computer
- Support for multiple communication technologies (telephony, cell phone, DSL, radio, line modem, satellite, text messages, email, voice card, pager or internet) ensure message transmission
- Text messages ringtones ensure that you don't miss alarm messages
- Status reports provide critical information on house functions and animal statistics
- Text messages sent in a variety of languages
- Local communication via wired or wireless communication
- Test functions to ensure that text and ringtones function as required
