# POLA HP54 4 Stage Ventilation Controller

The HP54 is a 4 stage control for switching ventilation fans or steps of heating.

## Features & Benefits

- Programmable for step or sequential control
- An additional relay gives 1 additional heat or cool output to supplement ventilation/heating
- For poultry safety, a minimum ventilation cycle timer output exists to ensure a small amount of airflow exists under all circumstances
- The large display makes for easy reading
- With the addition of the HPAL relay module, high and low alarm protection is available
- Supplied with: 4 x SX Temperature Sensors
- Available as panel mount or surface mount versions
