

Munters Rotem Comm-Box

The Munters Rotem Comm-Box supplies complete web access with remote monitoring and control for your Rotem livestock controller from any internet-connected device with a web browser.

Installed as an add-on to the Communicator, the two units provide a complete service package; the Communicator supplies its proven alarms & events functionality, while Comm-Box enables remote monitoring & control via the Web & Cloud. The Comm-Box can also be installed as a stand-alone unit for customers that only require web access without remote alarms or events monitoring. From a single computer, tablet, or smartphone you can manage your entire network.

RotemNet Web is Rotem's web application that provides the software interface to your controllers. In addition to the control and data access, RotemNet Web is fully flexible, supporting:

- Who can access which groups of farms
- Defining different permission levels for each user
- Allowing each user to define how they want to view the data (for example, in which language)

Features & Benefits

Network Management

- Cloud-based access to controllers; multiple, simultaneous users can have network access
- Local communication via wired or wireless communication
- Status reports provide critical information on house functions and animal statistics
- Enables control over multiple farms from a single login

Web Application

- Full control over your farm's controllers
- Overview of houses' activities
- User customised dashboard
- Displays a comparison of houses' main performance parameters

Smart Phone Application

- Fully enabled mobile control device
- Consistent look and feel with the Web Application
- Supports push notifications
