LSL co Single Channel 0-10v LED Programmer

An easy to use controller to enable time/day/lux level control of our dimmers and IP67 LED lights over a 24h period.

Our Simulated Lighting Environmental Controller SLEC® unit offers the latest technology for lighting control over a 24 hour period. Simulated dawn to dusk setting and illuminance (lux) light levels can be programmed and stored within the unit.

Features & Benefits

- 220-240V AC 50Hz
- Ambient operating temperature -15°C to +50°C
- IP54 Surface mounted steel enclosure
- The controller has a 24-hour clock with 5 individual mode settings for time, day and light levels
- Single-channel output 0-10V to control our dimmers
- Soft lamp start
- Non-volatile memory – will keep its settings even after a power loss
