

POLA HP44 4 Zone Digital Thermostat

The HP44 is a 4 zone thermostat for monitoring and control of temperatures in 4 zones using its own 4 sensors.

Features & Benefits

- Each zone can be treated independently, having its own set of parameters
- Auto scanning of all 4 temperatures
- As well as 4 setpoints, each zone has high and low alarm levels which with the addition of HPAL module, will give a further 2 outputs
- The large display makes for easy reading
- Zones may be 'linked' together for staged switching
- Supplied with: 4 x SX Temperature Sensors
- Available as panel mount or surface mount versions
