

TwistII Clean Flushable Filter

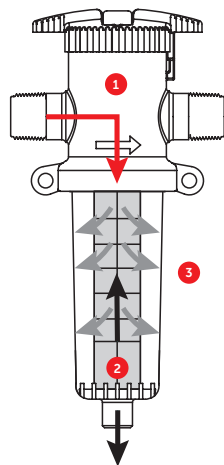

TwistII Clean is an easy to use sediment filter for agricultural use. Built with a 200% larger screen area, it is made to remove sand and sediment from water.

Patented Reverse Flushing Action

When the top handle is turned, three events take place:

- 1 Flow direction is changed to inside-out
- 2 The filter element is lifted to open the bottom flush port
- 3 An inside-out backwash occurs, and the filter element is cleaned

Features & Benefits

- Exclusive Reverse-Flush Technology reverses the flow of water to push all of the dirt off and out of the filter
- No need to take the filter apart to scrub the mesh, simple 1/4" turn operation – simply twist and clean!
- 200% larger filter element means more time between flushes
- Durable stainless-steel screens are stronger and more durable than common nylon screens for longer life
- No need to turn off the water to clean so no air will enter the system
- The filter is fully cleaned with each flush. No lingering or stuck particles means no build-up that you'll have to clean out
- UV resistant body means less yellowing and longer life
- Viton O-Ring at the flush port means maximum strength for a longer life of the filter
